BASED Nigeria

01 PROFILE

Computer Science graduate of Kwara State University and founder of Greene Studios. I design and build web and mobile products end to end, from the brand and interface to the API and database, with a focus on real-time systems, offline-first architecture and AI features. I care about finding the actual problem before touching a screen, and shipping things people use.

02 SELECTED PROJECTS

Sentry AI community safety platform 2026

1ST PLACE · BUILD WITH GEMMA: GENAI FOR SDGS Hackathon · Full-stack engineer

- Pivoted mid-hackathon from a community feed to campus safety, then redesigned and rebuilt the platform in one night.
- Used Google DeepMind's Gemma 4 to triage incident reports and turn them into actionable insights for responders.
- Built a dark-mode-first dashboard for security personnel, pairing AI triage with rapid response workflows and WhatsApp reporting.

React FastAPI Gemma 4 WhatsApp API

S.A.F.E. Smart Alert & Field Emergency System 2025–26

Campus safety platform for KWASU · Lead engineer

- One-tap, geolocated SOS that fires in under three seconds, with no sign-in and no forms in an emergency.
- AI triage microservice that classifies each report by type and urgency and routes it to the right team.
- Live dispatch dashboard with a real-time incident map, queue management and officer assignment.
- Three redundant delivery paths, including a peer-to-peer BLE relay when signal is low, plus WhatsApp alerts (Meta Cloud API & Twilio) and anonymous reporting.

React Native (Expo) Node.js Express MySQL Socket.io JWT Maps APIs

MeshLearn Offline learning over BLE mesh 2025

RUNNER-UP · KWASU TECH CONFERENCE Founder · Full-stack engineer

- Reframed slow downloads as a distribution problem: one connected phone seeds lectures to nearby phones over Bluetooth Low Energy.
- Content moves in hash-verified chunks; a bad chunk is re-requested from another peer.
- Built a conflict-resolution sync layer so offline progress is never overwritten when a device reconnects.
- Built the React Native app and mesh logic end to end, and trained a TensorFlow Lite recommendation model.

React Native BLE mesh TensorFlow Lite

PayVault Offline payments protocol 2026

Concept & case study · Product design, architecture, brand

- Designed a protocol where two devices commit to a payment with ECDSA signatures and escrow, then reconcile with the settlement network once signal returns.
- Split the system into seven layers (signing, escrow, transport, queuing, settlement and more) so each can be reasoned about and replaced on its own.
- Created the brand identity and marketing site for banks, PSPs and mobile money operators.

04 SKILLS

Languages

JavaScript (ES6+) TypeScript
Python HTML5 CSS3

Frontend

React Next.js (SSR/SSG)
React Native Tailwind CSS Vite
Framer Motion GSAP

Backend

Node.js Express FastAPI
REST APIs Socket.io JWT auth

Data & AI

Data analysis Visualization
TensorFlow Lite Gemma
LLM integration

Databases

MySQL (Sequelize) Firebase
Supabase

05 TOOLS

VS Code, Figma, Git & GitHub, Postman, Docker, Vercel, Render, Google Maps API, Twilio (WhatsApp API), ElevenLabs, PostHog, WordPress (Elementor).

06 EDUCATION

Kwara State University (KWASU)

B.Sc. Computer Science
Graduated 2026

07 RECOGNITION

1ST PLACE

Build with Gemma: GenAI for SDGs · Sentry · 2026

RUNNER-UP

KWASU Tech Conference · MeshLearn · 2026

08 STRENGTHS

- Problem solving
- Clean, maintainable code
- UI/UX & frontend craft
- Data analysis & visualization
- API design & integration
- Team collaboration
- Fast learner, adaptable

Founder

- Run a studio for brand identities, websites and product design, from first sketch to live product.
- Delivered brand systems for Bloom (healthcare), Vera (wellness) and Luminary (analytics), and the STRIKE streetwear storefront.
- Built the studio site: a multi-mode (light, dark, artistic) responsive experience with smooth motion.

React Tailwind CSS Framer Motion Figma Vercel

greene-studios.vercel.app

03 STUDIO & CLIENT WORK

STRIKE	Streetwear storefront that reads like a lookbook Frontend engineer · Client
Bloom	Healthcare brand system built around AAA-contrast body text Brand & product design
Luminary	Analytics brand: graphite UI, one electric blue for live values Brand & product design
Vera	Wellness brand system: “made from things you can name” Brand & web design
Crypto with Shola	Redesign of an education platform, built for the real world Web design · Client

09 INTERESTS

Coding · Data analysis · UI/UX design · Farming & agri-tech · Problem solving

“I believe technology is most powerful when it solves real problems and makes life better for people. I’m committed to building products that are not just functional, but meaningful.”

ABEL O. ADIGUN
